

SIDING REQUIREMENTS

Permit: A building permit is required for all siding projects beyond simple repairs of replacing only individual pieces of cladding. When an entire wall is replaced, a permit is needed before work begins.

License: Contractors engaged in building projects are most often required to obtain a Contractor's License or Remodeler's License from the State of Minnesota. For more information about contractor licensing, contact the Rum River Consultants office at 763-331-7722 or Minnesota Department of Labor and Industry at (651) 284-5069, or www.dli.mn.gov.

Inspection:

- 1) A Final inspection is required when all work is completed.

Water Resistive Barrier / Flashing Materials

MN State Building Code requires a barrier be placed over all exterior walls with limited exceptions. MN Residential Code Section [R703.4](#) requires all self-adhered membranes used as flashing around windows and doors shall meet Standard [AAMA 711](#). Look for this label on products or in their listing material. For questions about these requirements call Rum River Consultants.

Electrical Permit Requirements

Re-installation of electrical fixtures, pipes and boxes requires an electrical permit and inspections.
