

Braced Wall Line (BWL) Supplement Details

The information on this form is requested to ensure code compliance when building new single-family homes with attached garage. See listed [code sections](#) for more detailed information.

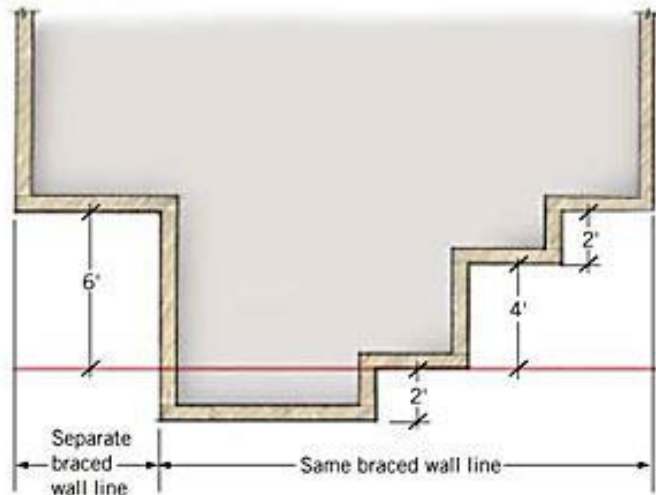

Indicate the following:

1. Method of BWL used in the building design as indicated by [R602.10](#) _____
(see illustrations on [Table R602.10.4](#))
2. Exterior wall sheathing type, thickness and fastening requirements

3. BWL method used at garage front wall _____
4. Garage wall height from underside of bottom plate to underside of roof framing _____
5. Description of hold-downs and header to jack stud strap required by BWL design method

6. Details of front garage wall construction, including below grade reinforcement (if required). This can be on the building plans or provided separately.
